

ΕΚΤΕΛΕΣΗ ΠΡΟΓΡΑΜΜΑΤΟΣ:

Relay_node: banana

```
csd3307@banana:~/diktya/server$ python relay_node.py

Please give me the ip of client: 147.52.19.20
Please give me the port of client: 16101

Please give me the port of relay: 16005
starting up on port 16005
waiting for a connection
█
```

Relay_node: milo

```
csd3307@milo:~/diktya/server$ python relay_node.py

Please give me the ip of client: 147.52.19.20
Please give me the port of client: 16102

Please give me the port of relay: 16008
starting up on port 16008
waiting for a connection
█
```

Client: lotos

```
csd3307@lotos:~/diktya/client$ python client.py
Please give me number of pings: 1█
```

Εμφανίζεται στον client(lotos)

```
Please give me the port of client: 16101█
```

Εμφανίζεται στον relay_node (banana)

```
Please give me number of pings: 1
Please give me name_relay: my_relay1█
```

Περιμένω μέχρι να εμφανιστεί στον client(lotos)

```
Please give me the port of client: 16102█
```

Εμφανίζεται στον relay_node (milo)

```
Please give me number of pings: 1
Please give me name_relay: my_relay2█
```

Εμφανίζεται στον client(lotos)

Δίνει ο χρήστης το κριτήριο RTT / HOP

```
RTT OR HOP: HOP
